rUNCTION: Regulates eIF4E activity by preventing its assembly into the eIF4F complex. Mediates the regulation of protein translation by hormones, growth factors and other stimuli that signal through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to insulin, EGF and PDGF.
SIMILARITY: Belongs to the eIF4E-binding protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the MAP Kinase pathway.

SUBUNIT: Nonphosphorylated EIF4EBP1 competes with EIF4G1/EIF4G3 to subunit: Nonphosphorylated EIF4EBP1 caused MAP-kinase (MAPK1 and Interact with EIF4E; insulin stimulated MAP-kinase (MAPK1 and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G1/EIF4G3 to bind and consequent initiation of translation. Rapamycin can attenuate insulin stimulation,

Sonenberg N., Lawrence mitogen-activated protein kinase and translation initiation.";

Science 266:653-656(1994).

-!- FUNCTION: Regulates eIF4E activity by preventing its assembly into the eIF4F complex. Mediates the regulation of protein translation by hormones, growth factors and other stimuli that signal through the MAP kinase pathway.

-!- SUBUNIT: Nonphosphorylated EIF4EBP1 competes with EIF4G1/EIFG3 to interact with EIF4E, insulin stimulated MAP-kinase (MAPK1 and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G to bind and consequent initiation, mediated complex allowing EIF4G to bind and consequent initiation, mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CONFLICT

                                                                                                                                                                                                                                                                            -i- TISSUE SPECIFICITY: Expressed in all tissues examined; highest levels in fat and skeletal tissue, lowest levels in kidney.
-i- pTM: Phosphorylated on serine and threonine residues in respons to insulin, EGF and PDGP.
-i- SIMILARITY: Belongs to the eIF4E-binding protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata;

FUNCTION: Regulates elf4E activity by preventing its assembly into the elF4F complex. Mediates the regulation of protein translation by hormones, growth factors and other stimuli that signal through the MAP kinase pathway.
SUBUNIT: Nonphosphorylated Elf4EBP1 competes with Elf4G1/Elf4G3 to interact with Elf4E; insulin stimulated MAP-kinase (MAPK1 and
                                                                                                                                                                                     European
                                                                                                                                                                                                                                                                                                                                                                                         interact with EIF4E; insulin stimulated MAP-kinase (MAPKI and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G1/EIF4G3 to bind and consequent initiation of translation. Rapamycin can attenuate insulin stimulation,

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               B B

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB DB

New composition comprising a substance that modulates the status of 121P2A3 polypeptides, useful for eliciting humoral or cellular immune responses or in assessing the status of 121P2A3 gene products in normal WPI; 2003-092956/08.

Claim 13; Page 130; 362pp; English.

versus cancerous tissues.

The invention relates to a novel composition comprising a substance that modulates the status of a protein, 121P2A3. The composition of the invention has cytostatic and immunostimulant activity, and is useful as a vaccine. The 121P2A3 proteins and polynucleotides are useful for eliciting humoral or cellular immune response. The polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities

The proteins are useful for generating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of the invention
invention has cytostatic and immunostimulant activity, and is useful as a vaccine. The 12192A3 proteins and polynucleotides are useful for eliciting humoral or cellular immune response. The polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 12192A3 that may contribute to malignant phenotype, and in assessing the status of 12192A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; 121P2A3; cytostatic; immunostimulant; vaccine; SSH; humoral immune response; cellular immune response; suppression subtractive hybridisation; HLA; human leukocyt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a substance that modulates the status of 121P2A3 polypeptides, useful for eliciting humoral or cellular immune responses or in assessing the status of 121P2A3 gene products in norms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Challita-Eid PM, I

                     The invention relates to a novel composition comprising a substance that modulates the status of a protein, 121223. The composition of the invention has cytostatic and immunostimulant activity, and is useful as a vaccine. The 121223 proteins and polynucleotides are useful for eliciting humoral or cellular immune response. The polynucleotides are useful for composition that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 121223 that may contribute to malignant phenotype, and in assessing the status of 121223 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 121223 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or cells reactive with the product are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP95595 represent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a substance that modulates the status 121P2A3 polypeptides, useful for eliciting humoral or cellular in responses or in assessing the status of 121P2A3 gene products in versus cancerous tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Challita-Eid PM, F

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                        The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 121P2A3. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polynucleotides are useful for celiciting humoral or cellular immune response. The polynucleotides are CC useful for characterising cytosenetic abnormalities of this chromosomal CC locue, as tools that can be used to delineate cytosenetic abnormalities of the chromosomal region that encodes 121P2A3 that may contribute to CC malignant phenotype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for CC agents or cellular factors that bind to 121P2A3 or a particular structure CC domain, and in various therapeutic and diagnostic contexts, including CC cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies CC for the management of cancer. The sequences shown in ABB83646 - ABB95595
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity

                          The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 121P2A3. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polymucleotides are useful for CC eliciting humoral or cellular immune response. The polymucleotides are CC useful for characterising cytogenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities in he chromosomal region that encodes 121P2A3 that may contribute to CC malignant phenotype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for CC generating and characterising domain-specific antibodies, for identifying CC agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including CC cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP8364 - ABP95595 CC represent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                        The invention relates to a novel composition comprising a substance that modulates the status of a protein, 12122A3. The composition of the invention has cycostatic and immunostimulant activity, and is useful as a vaccine. The 1212A3 proteins and polynuclectides are useful for callular immune response. The polynuclectides are useful for characterising cytogenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 1212A3 that may contribute to malignant phenotype, and in assessing the status of 1212PA3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying agent or cellular factors that bind to 1212A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP995595 represent peptides from the 1212PA3 variants of the invention

                                                   Ś
                                                                                                                                                                                                                                                                              The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 121P2A3. The composition of the C invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polynucleotides are useful for C eliciting humoral or cellular immune response. The polynucleotides are useful for characterising cytosenetic abnormalities of this chromosomal CC useful for characterising cytosenetic abnormalities of the chromosomal region that encodes 121P2A3 that may contribute to CC in the chromosomal region that encodes 121P2A3 that may contribute to CC in normal versus cancerous tissues. The proteins are useful for CC gents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including CC cancer vaccines. The antibodies or T cells reactive with the product are CC useful in passive or active immunisation, and in imaging methodologies CC represent peptides from the 121P2A3 variants of the invention
                                                                                                                Matches
                                                                                                                                        Query Match

The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polymucleotides are useful for CC eliciting humoral or cellular immune response. The polymucleotides are CC useful for characterising cytogenetic abnormalities of this chromosomal region that encodes language the chromosomal region that encodes 121P2A3 that may contribute to CC malignant phenotype, and in assessing the status of 121P2A3 gene products CC in normal versus cancerous tissues. The proteins are useful for CC agents or cellular factors that bind to 121P2A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including CC cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in maging methodologies CC represent peptides from the 121P2A3 variants of the invention
                                                                                                                                                          S

                                                                                                                                                                                                          ફ
                                                                                                                                                                                                                                                                                                                           The invention relates to a novel composition comprising a substance that compodulates the status of a protein, 121P2A3. The composition of the convention has cytostatic and immunostimulant activity, and is useful as a convention. The 121P2A3 proteins and polynucleotides are useful for characterising proteins and polynucleotides are useful for claracterising cytogenetic abnormalities of this chromosomal colous, as tools that can be used to delineate cytogenetic abnormalities in hormal versus cancerous tissues. The proteins are useful for composities and in assessing the status of 121P2A3 gene products concerning and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure concern vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies correspresent peptides from the 121P2A3 variants of the invention

                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel composition comprising a substance that composition has cytostatic and immunostimulant activity, and is useful as a vaccine. The 121P2A3 proteins and polymucleotides are useful for cellular immunostimulant activity, and is useful as a cytostatic and immunostimulant activity, and is useful as a cytostatic abundant proteins are useful for cellular immune response. The polymucleotides are useful for useful for characterising cytosenetic abnormalities of this chromosomal locus, as tools that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 121P2A3 that may contribute to malignant phenotype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure conseins and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83546 - ABP95595 crepresent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc invention has cyrostatic and immunostimulant activity, and is useful as a croactine. The 121P2A3 proteins and polynucleotides are useful for ellilar immunostimulant activity, and is useful for carcine. The 121P2A3 proteins and polynucleotides are useful for cellular immune response. The polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal colors, as tools that can be used to delineate cytogenetic abnormalities of in the chromosomal region that encodes 121P2A3 that may contribute to malignant phenotype, and in assessing the status of 121P2A3 gene products in normal versus cancerous tissues. The proteins are useful for company the contribute of contribute and characterising domain specific antibodies, for identifying company, and in various therapeutic and diagnostic contexts, including concer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP95595 crepresent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                      გ
cc modulates the status of a protein, 12122A3. The composition of the convention has cytostatic and immunostimulant activity, and is useful as a cc vaccine. The 1212A3 proteins and polynucleotides are useful for calcular immune response. The polynucleotides are cc eliciting humoral or cellular immune response. The polynucleotides are cc useful for characterising cytogenetic abnormalities of this chromosomal colors, as tools that can be used to delineate cytogenetic abnormalities cc in the chromosomal region that encodes 1212A3 that may contribute to cc malignant phenotype, and in assessing the status of 1212A3 gene products cl normal versus cancerous tissues. The proteins are useful for cg generating and characterising domain-specific antibodies, for identifying cagents or cellular factors that bind to 1212A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cc cancer vaccines. The antibodies or T cells reactive with the product are cuseful in passive or active immunisation, and in imaging methodologies cor the management of cancer. The sequences shown in ABP83646 - ABP95595 cc represent peptides from the 1212PA3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 121P2A3. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polynucleotides are useful for cliciting humoral or cellular immune response. The polynucleotides are CC useful for characterising cytogenetic abnormalities of this chromosomal region that can be used to delineate cytogenetic abnormalities in hore chromosomal region that encodes 121P2A3 that may contribute to CC malignant phenotype, and in assessing the status of 121P2A3 gene products CC in normal versus cancerous tissues. The proteins are useful for CC generating and characterising domain-specific antibodies, for identifying CC agents or cellular factors that bind to 121P2A3 or a particular structure CC cancer vaccines. The antibodies or T cells reactive with the product are CC useful in passive or active immunisation, and in imaging methodologies CC represent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel composition comprising a substance that commodulates the status of a protein, 12122A3. The composition of the cinvention has cytostatic and immunostimulant activity, and is useful as a cyaccine. The 1212A3 proteins and polynucleotides are useful for cellular immunostimulant response. The polynucleotides are useful for useful for characterising cytosgenetic abnormalities of this chromosomal course, as tools that can be used to delineate cytosgenetic abnormalities in the chromosomal region that encodes 12122A3 that may contribute to malignant phenotype, and in assessing the status of 12122A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain specific antibodies, for identifying agents or cellular factors that bind to 12122A3 or a particular structure domain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83546 - ABP95595 crepresent peptides from the 12122A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; 121P2A3; cytostatic; immunostimulant; vaccine; SSH; humoral immune response; cellular immune response; suppression subtractive hybridisation; HLA; human leukocyte
